

COMP1950 :: HOMEWORK 03

OBJECTIVE Use Advanced CSS Selectors and Alternate Stylesheets

REQUIREMENTS Team up with one of your classmates and write an alternate set of styles for their COMP1950 home page.

A: Build a new stylesheet for the HTML of your partner's COMP1950 home page. Make a noticeable effort to significantly change the page from your partner's original styles, including changes to: layout, background images, colors, fonts, etc. Make it a pleasant and different experience than it was before. Ensure your CSS includes examples of the following:

- #id, .class, HTML selectors
- Psuedo-classes and/or pseudo-elements
- Descendant selectors
- Child Selectors
- Attribute selectors

Send your **.css** and any related resources (eg: images) to your partner.

B: When you receive the styles of your partner, apply them as an alternate stylesheet to your COMP1950 hub page. The **title=""** of the alternate styles should be your partner's name. Do not allow your default styles to cascade into your partner's alternate styles.

C: Update your COMP1950 hub page navigation so that the CSS option links to your partner's homepage on *bcitcomp.ca*

SUBMISSION **Assigned:** Session 3

Due: 11:59pm the night before Session 4
