COMP1950 :: HOMEWORK 04

OBJECTIVE Build a CSS layout

REQUIREMENTS Design and build a CSS layout that is demonstrated across three .html files. Each of the three .html files should contain different quantities of Lorem Ipsum content in order to illustrate how your layout handles long scrolling pages as well as pages with very little content.

Your layout design is up to you, but must include:

- A CSS Reset.
- Typical page regions: header, nav, footer
- Use at least one of the following CSS positioning techniques: **flex** or **grid**
- A well styled navigation that links together all three Homework 4 pages
- One of the three pages must include all the "Kitchen Sink" text at this URL: http://www.blindtextgenerator.com/snippets
- All content styled with pleasant colors, fonts, with strong contrast ratio
- Table rows styled with alternating backgrounds
- In the top right of the page include a clickable shopping cart icon (href="#"), and an HTML form for a Search field with an accompanying magnifying glass icon. The form does not need to be functional. Elsewhere on the page include clickable icons for one or more social media sites (Facebook, etc). Use either a sprite or font-icons for all icons. Use online resources to assemble your icons.
- At least one example of using CSS background image

Ensure your COMP1950 hub page navigation 'Layout' option is linked to one of the pages of this homework. Your Homework 4 pages do not need to link back top your hub page.

SUBMISSION **Assigned**: Session 4   **Due**: 11:59pm the night before Session 5
